Question:If $A\left(\frac{a}{3},4\right)$ is the midpoint of the line segment joining the points $B\left(-6,5\right)$ and $C\left(-2,3\right)$, then the value of a is

Solution:

$$\mathbf{A} = \frac{k\mathbf{C} + \mathbf{B}}{k+1} \tag{0.1}$$

where k is the ratio, here k=1

$$\mathbf{A} = \frac{\mathbf{B} + \mathbf{C}}{2} \tag{0.2}$$

$$\implies \mathbf{A} = \frac{\begin{pmatrix} -6\\5 \end{pmatrix} + \begin{pmatrix} -2\\3 \end{pmatrix}}{2} = \frac{\begin{pmatrix} -8\\8 \end{pmatrix}}{2} = \begin{pmatrix} -4\\4 \end{pmatrix} \tag{0.3}$$

$$\therefore \mathbf{A} = \begin{pmatrix} \frac{a}{3} \\ 4 \end{pmatrix} \tag{0.4}$$

$$\implies a = -4 \times 3 \tag{0.5}$$

$$a = -12 \tag{0.6}$$
